

Echoview

Products and purchasing

Echoview®'s licensing offers access to a wide range of functionality via different modules, giving you the flexibility to only license what you need and to add more capability later if required.

Prior to any license purchase our sales team will discuss your data processing requirements and analysis goals to help you to determine the modules you require. If you would like to trial the software prior to purchase, evaluation licenses are available on request.

To initiate the purchase of an Echoview product, please request a quotation from us or one of our authorized resellers. We work with you to find a product solution and the best price for your needs.

When purchased, an Echoview license is delivered via a USB dongle. One dongle is supplied per license, and the dongle can be used on as many computers as you wish but can only be used on one computer at a time (additional restrictions apply to student licenses, as described below).

Types of licenses

Echoview licenses are available as perpetual, annual subscriptions, or short-term leases. The most common Echoview license type is a perpetual license, which gives you

access to the version of Echoview that is available at the time of purchase forever, as well as perpetual access to any new versions that are released while you have an active Maintenance and Technical Support (MATS) subscription.

Annual subscriptions are for 12-month periods, whilst short-term leases are for very short-term projects, consulting jobs, or those who otherwise require access to an Echoview license for a defined time period.

There is no ongoing license ownership at the termination of a subscription or lease. After the time period ends, the licensed capabilities of the software can no longer be used unless a new license term is purchased.

Subscriptions and leases provide access to the current version of Echoview and include MATS during the license term.

Maintenance and Technical Support

For access to new releases of Echoview, as well as our technical support services, you need an active Maintenance and Technical Support (MATS) subscription. This provides you with instant access to any new Echoview versions plus assistance from our experienced technical support team.

New perpetual licenses include one year of MATS. If you have an initial project budget, but are unsure if future budget will be available, consider adding another years MATS subscription to your license purchase to ensure continued support for the lifetime of your project. Subscription licenses and leases include technical support.

To help you keep up to date with your MATS, you will hear from us prior to the end of your MATS subscription period with an invitation to renew. For further information on MATS please see our MATS brochure.

Upgrades

If your license does not have a current MATS subscription, but you wish to use the latest version of Echoview, you can purchase an upgrade. Note that this option costs more than keeping an up-to-date MATS subscription and does not include access to our technical support services.

The benefits of using the latest version of Echoview

Hydroacoustic science and technology is continually evolving, and so is Echoview. New versions of Echoview are released

Echoview

Products and purchasing

every year, which bring new features and capabilities, and improvements to performance and ease of use.

Staying up to date with the latest version of Echoview enables you to keep pace with these improvements, not to mention the latest developments in computer hardware and software that can significantly ease the burden of processing increasingly large datasets.

Student licenses

At the sole discretion of Echoview Software, a student license of Echoview may be provided to undergraduate and pre-doctoral students.

An Echoview student license is for use by the named student only, is provided only for work directly related to the student's study or thesis and must not be used for commercial work. The student license is supplied as a software lease for one year from the date of purchase and is enabled via a timed USB dongle which includes access to all Echoview modules.

Echoview training courses

Echoview training courses will provide you with an introduction to hydroacoustic theory as well as the skills to understand your acoustic data and process it efficiently using Echoview.

Courses are offered globally both online and face to face, and are tailored to best suit your level of experience and specific learning requirements. Training course dates, pricing, and registration details can be found on the Echoview Software website.

Echoview technical support

Our experienced support team is available to assist with any questions or queries you may have about Echoview or your hydroacoustic data. We have a wealth of knowledge, not only of Echoview itself, but of a wide range of hydroacoustic-related subjects. Our technical support team which includes acousticians, marine scientists and technical developers, are on hand to help you with Echoview. Echoview also has a comprehensive help file providing full documentation on Echoview's features and use, and tutorial and other self-educational resources can be found on our website.

Our clients regularly report that our support services and help file make a genuinely beneficial difference in their ability to process their hydroacoustic data effectively and efficiently.

Consulting

Echoview Software has a team of experienced professionals able to assist you with your hydroacoustic data processing or fisheries project.

Sponsored developments

Echoview Software offers the option of sponsored software development. If you require a specific new feature in the software, help with automation, or for Echoview to be compatible with a new type of data, we can negotiate a fee for the development costs to provide you with the required capability in a specified time frame.
